RadivitY Development

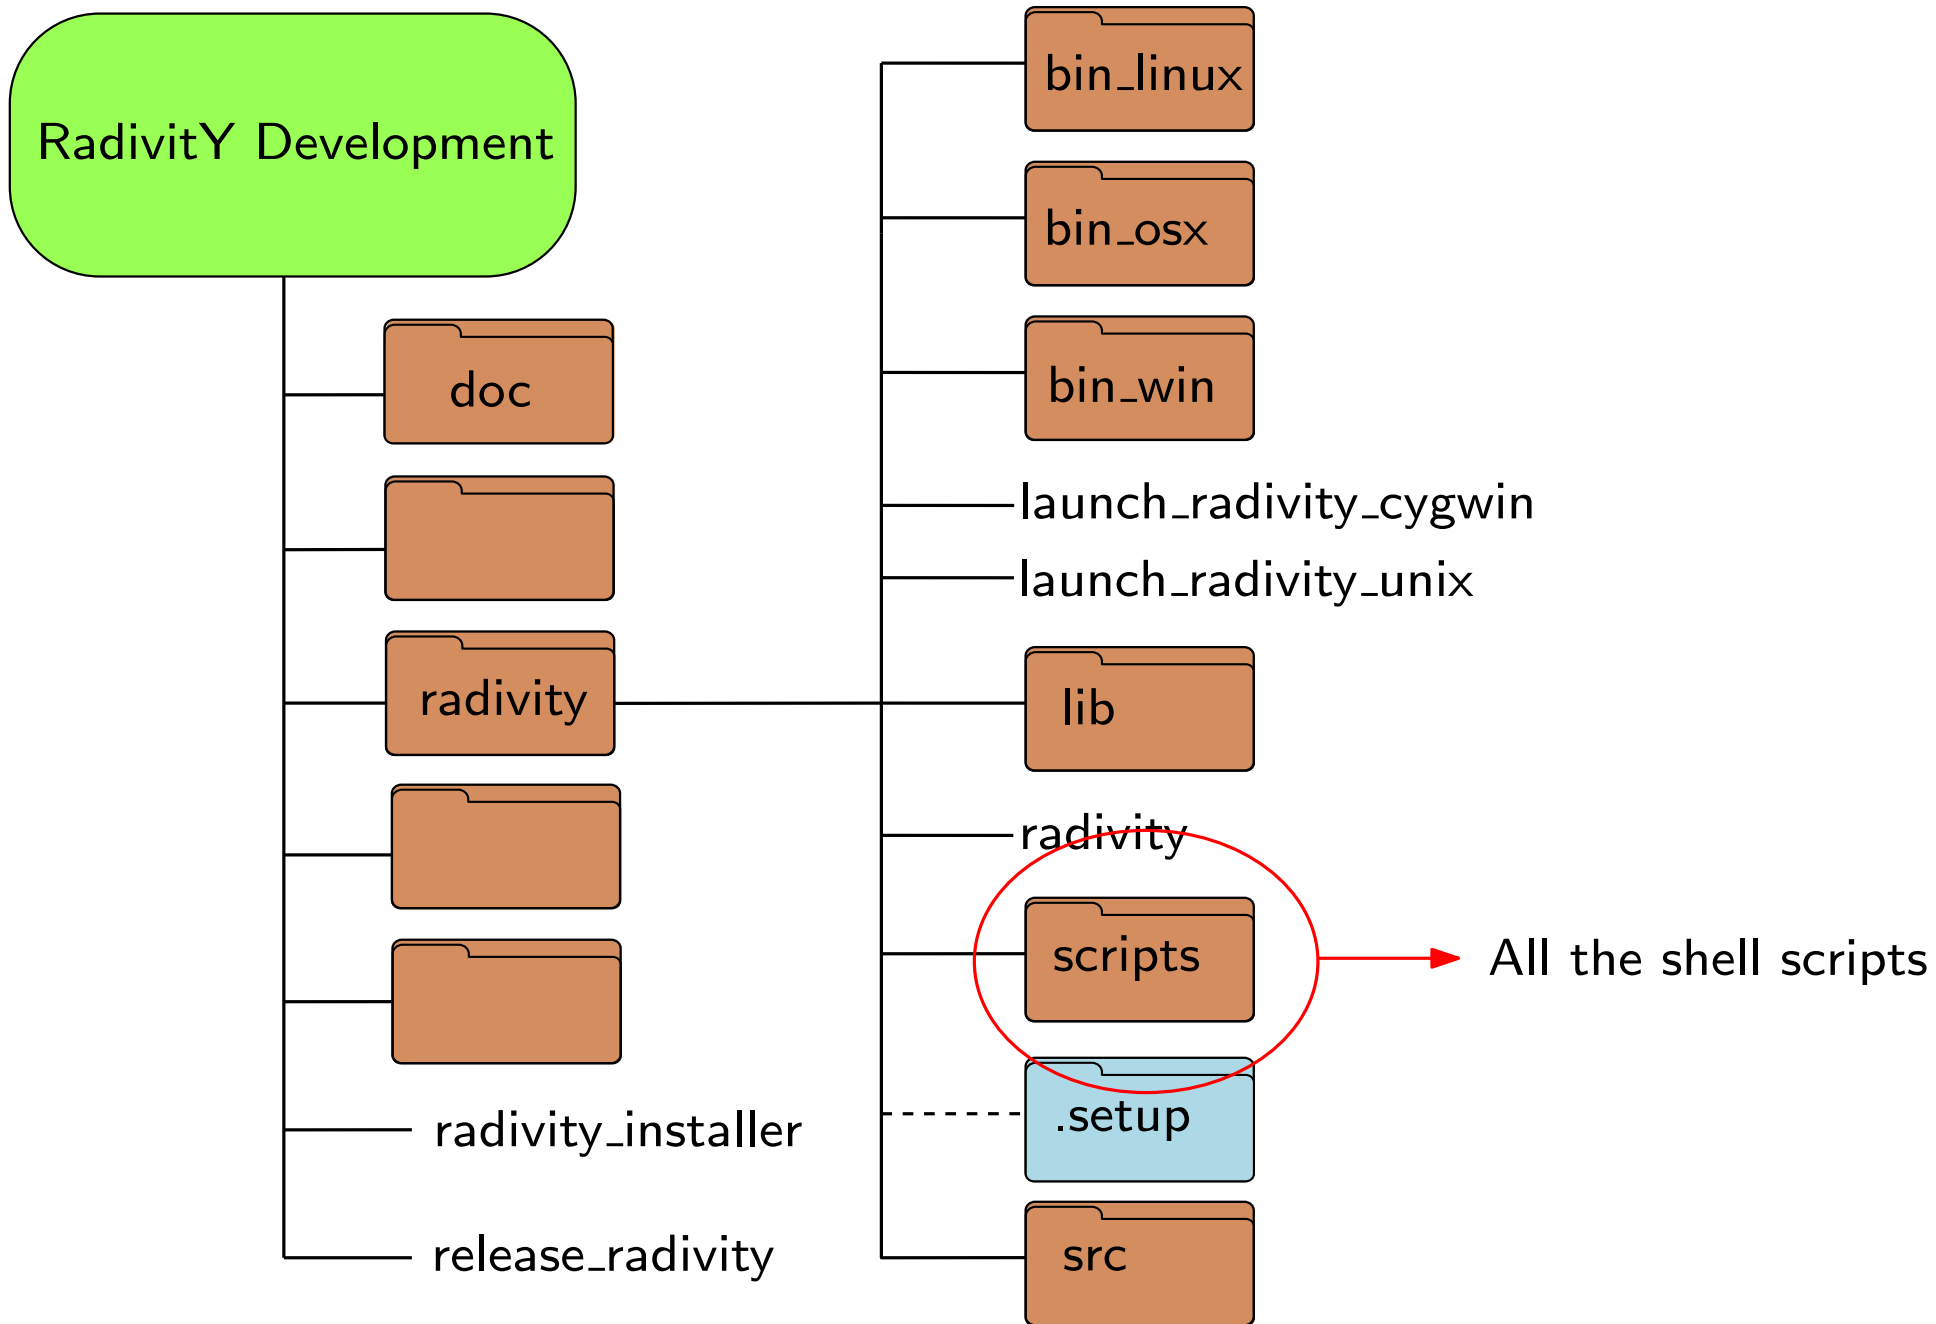

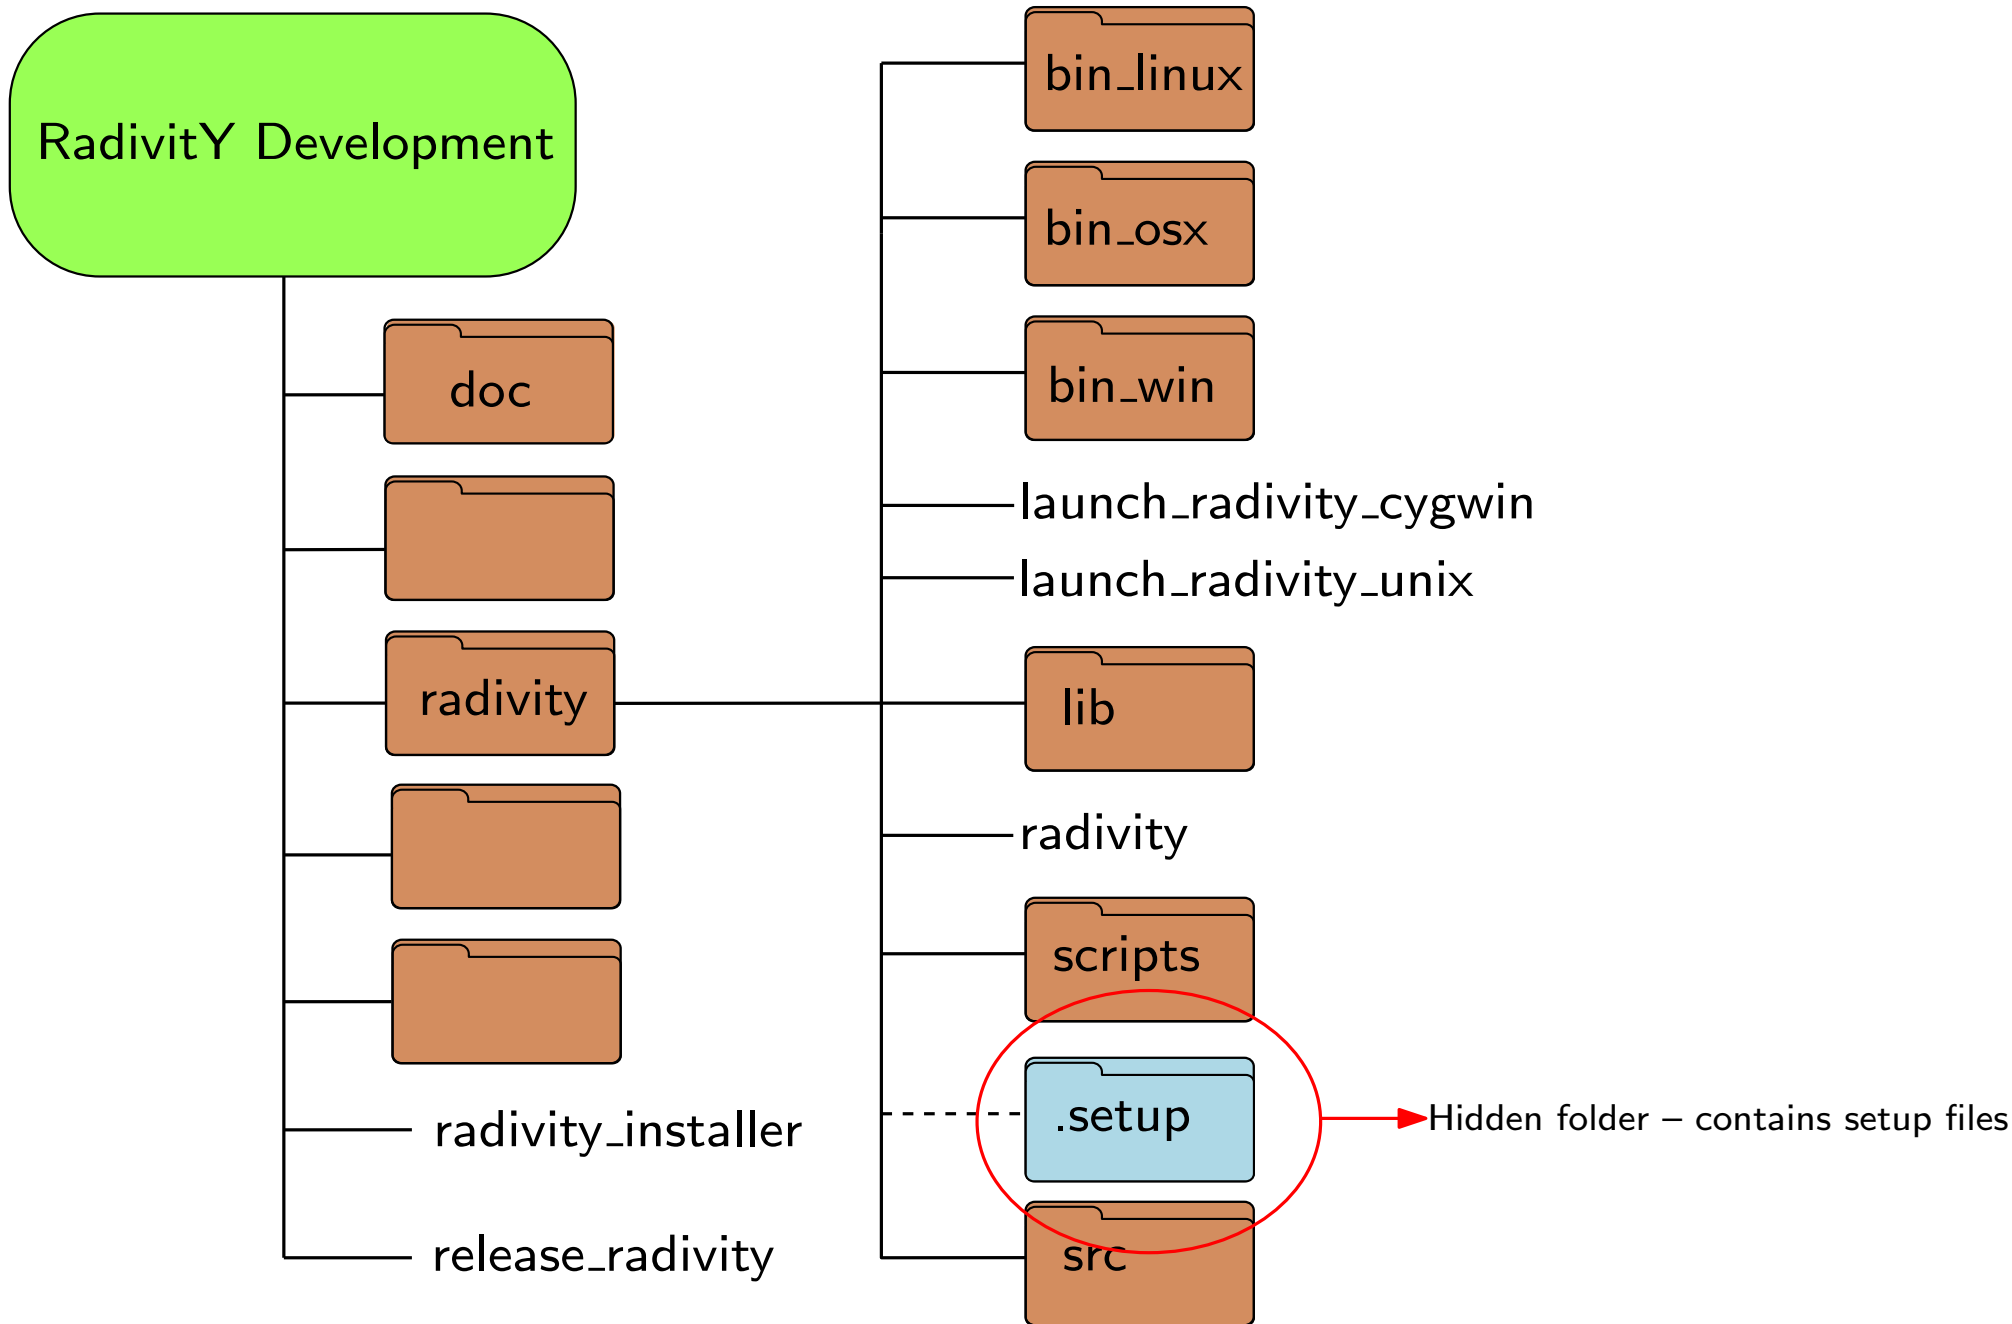

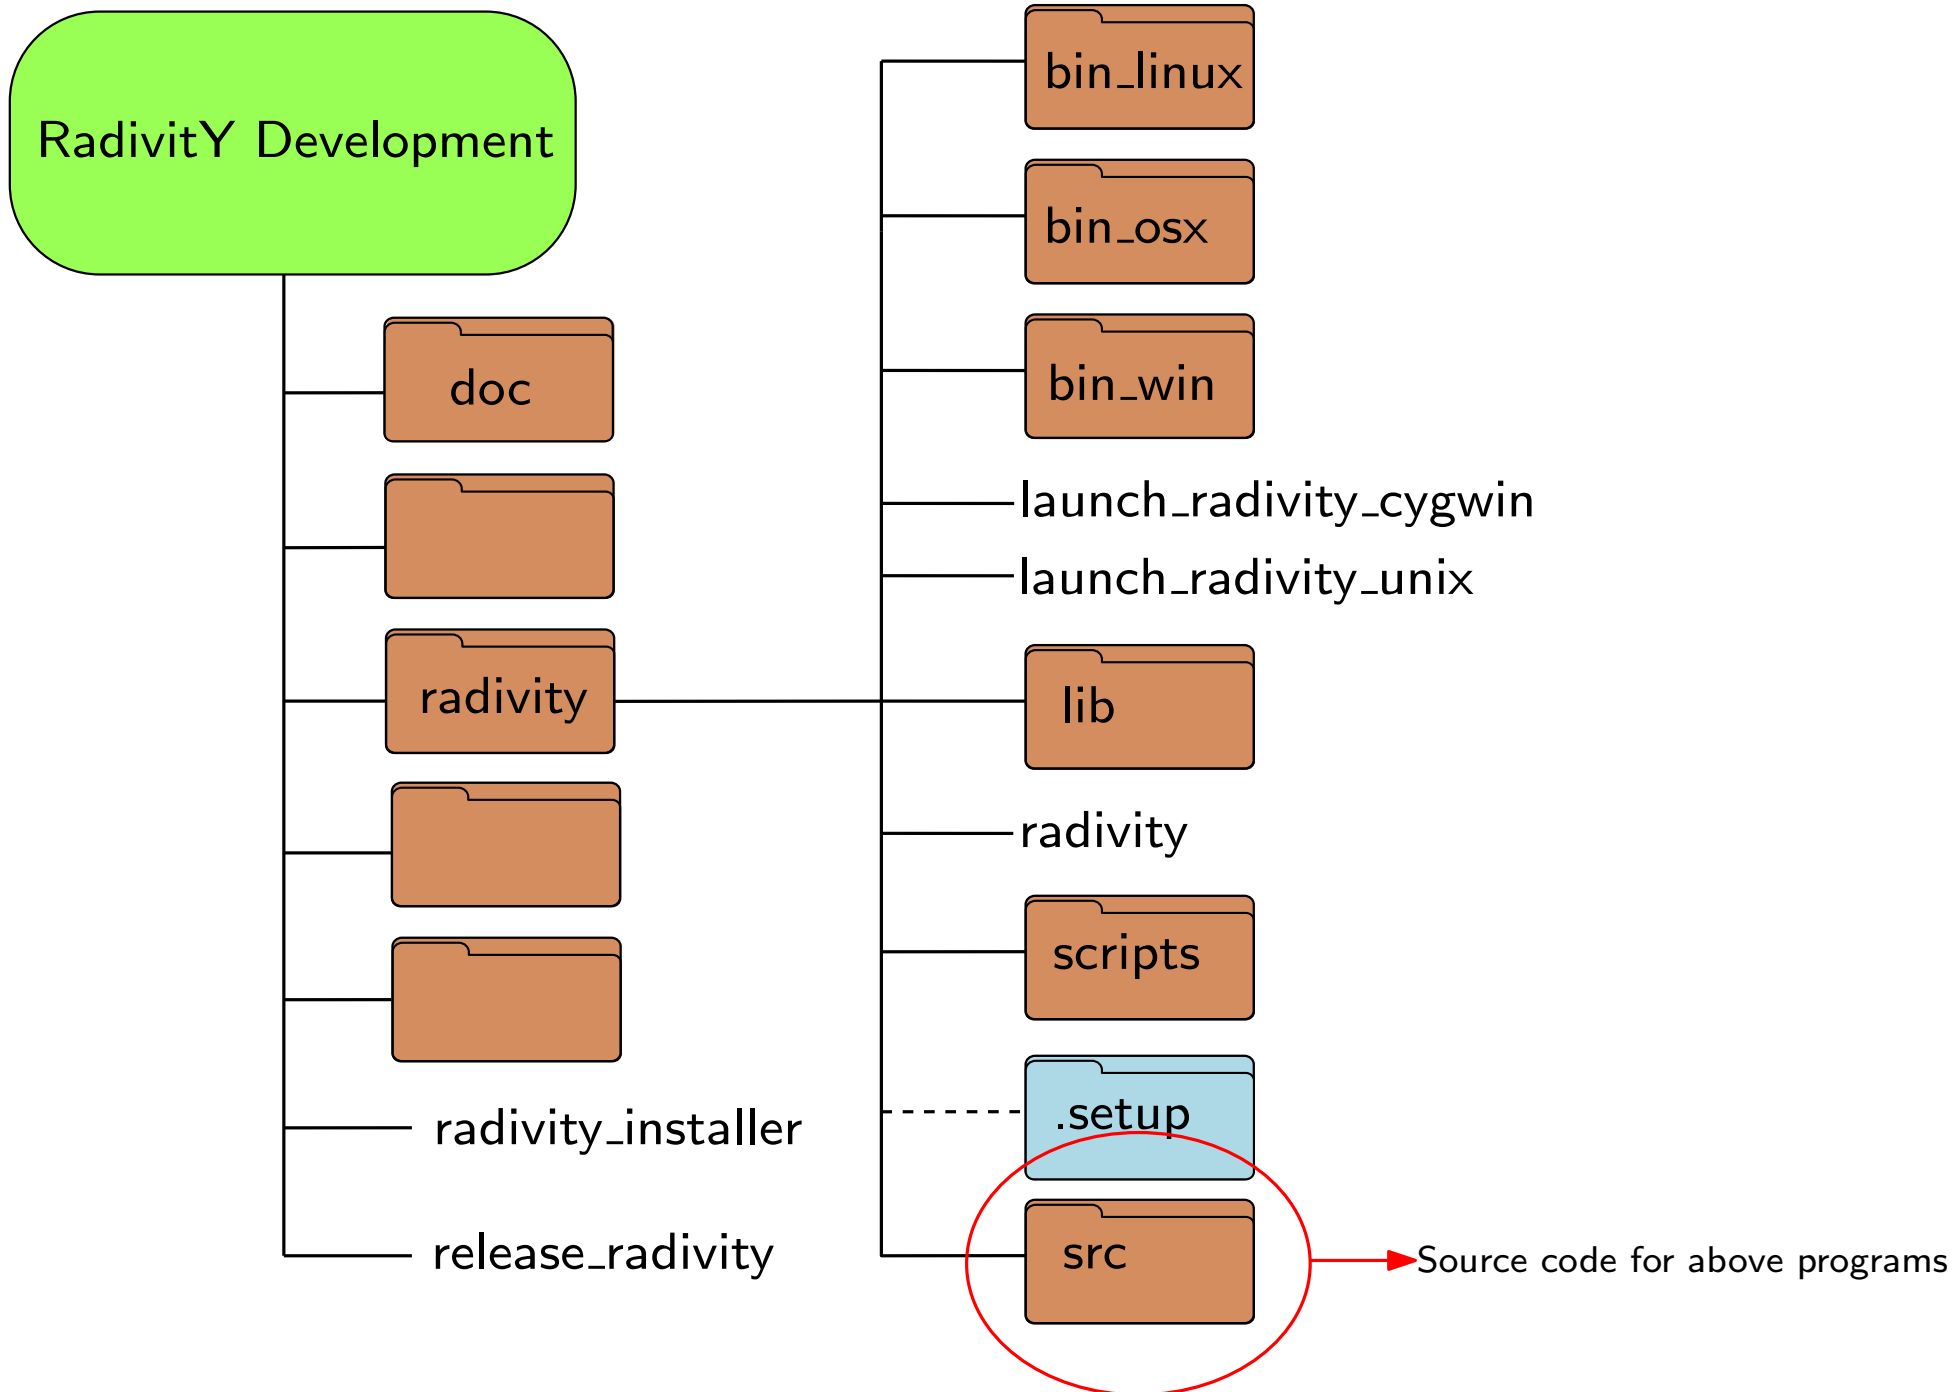

Cross-platform

- All programs have been compiled for Windows, Linux and OS X (they should not normally need updating).
- Compilation instructions (or makefiles) in each src sub-folder.
- All used programs (bash, awk, python, sed etc) are default on any Linux or OS X.
- On Windows make sure you have an updated Cygwin installation (I use mintty as terminal emulator).
- You need to be connected to the R drive in order to update RadivitY. Once updated you can run it offline.
- In Linux and OS X the R drive must be 'properly' mounted:
 - in Linux: Mount on /media/R
 - in OS X: Mount on /Volumes/R
